DETAILED ACTION

Inventorship

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Specification

The disclosure is objected to because of the following informalities:

Page 4, line 22; the term "infrared light emitting head 31" appears to refer to "ultraviolet light emitting head 31" (cf. page 4, line 23; "emit ultraviolet light" and page 5, lines 20-21; "light emitter 3 . . . emit ultraviolet light").

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3653

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Specifically, said claim recites the limitation "second power sensor" in line 2. There is insufficient antecedent basis for this limitation in the claim. It appears that the Applicant intended for said claim to depend from claim 3 in lieu of claim 1.

Allowable Subject Matter

Claims 1-3 and 5-12 are allowed.

Conclusion

The following related art made of record and not relied upon is considered pertinent to applicant's disclosure:

Patent Number 6,075,587 by Shiau because of its ultraviolet lamp,

Patent Number 5,915,518 by Hopwood et al because of its ultraviolet light source

104,

Patent Number 3,618,765 by Cooper et al because of its light sources 16, and

Patent Number 3,340,978 by Haville because of its detection head 56.
